# 《超新星计划》末期答辩

客户端开发:《Mass Fighting》

答辩人: 刘梦杰

导 师: 钟小武

### 一、自我介绍

➤mengjieliu(刘梦杰)

▶Red客户端战斗组 6.1至今开始实习

➤ Mini Game: 《Mass Fighting》

▶导师: 钟小武

▶熟悉Red帧同步流程、工具箱以及Kungfu编辑器相关需求开发

### 二、题目分析—物理和化学

✓化学: 游戏世界的一种既定的规则(如元素反应)

✓物理: 物理碰撞、物理模拟

### 二、题目分析—化学

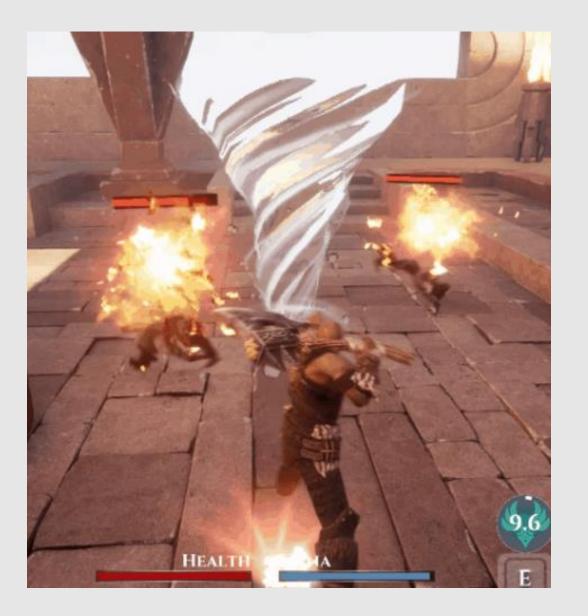

✓化学规则设计:技能附着指定元素于Monster

✓附着元素B时,若Monster已存在元素A,则A与B会触发元素反应

	火元素	冰元素	雷元素	水元素	风元素
火元素		释放技能"火柱"	对附近敌人造成击 飞伤害	暂时增加攻击力、暴 击率	扩散
冰元素			降低敌人40%防御力	冻结敌人,无法移动	扩散
雷元素				持续造成伤害	扩散
水元素					扩散
风元素					

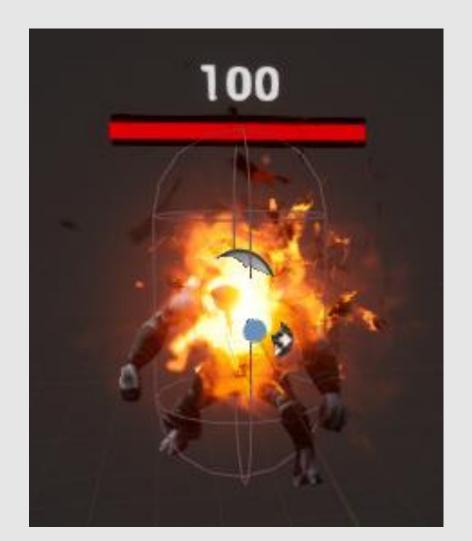

# 二、题目分析—物理

✓物理规则体现: 物理模拟

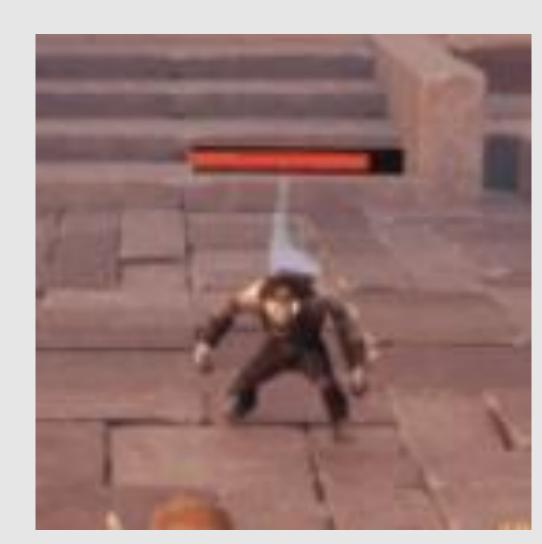

□技能击中敌人时会附着对应元素在怪物身上

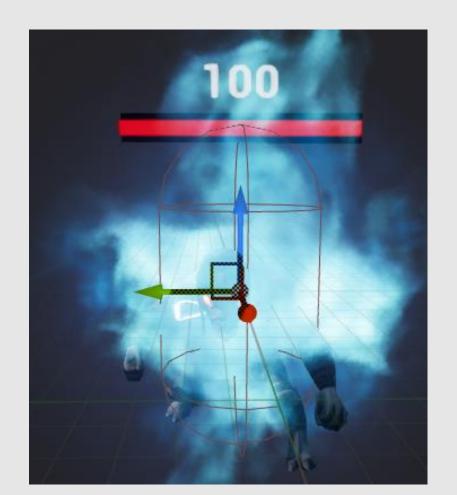

①火元素附着

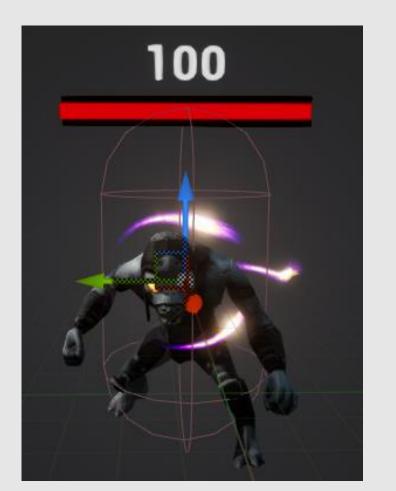

②水元素附着

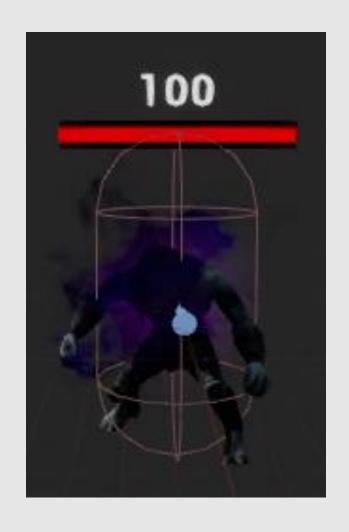

#### ③冰元素附着

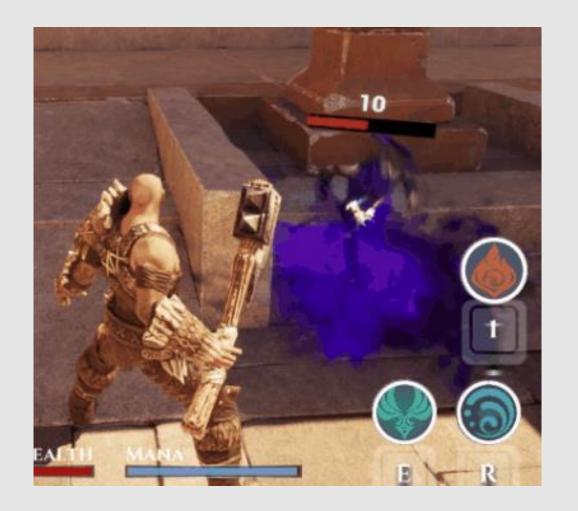

#### 4雷元素附着

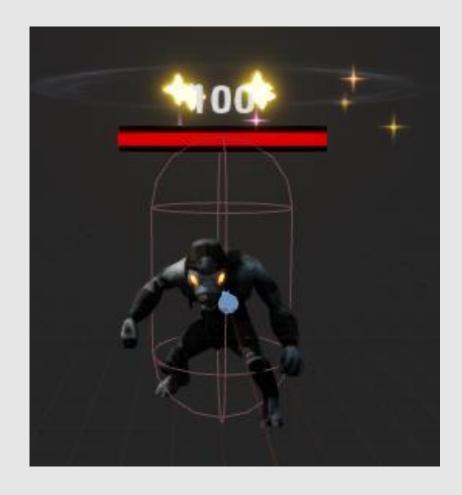

⑤水+雷=感电:周期性造成伤害

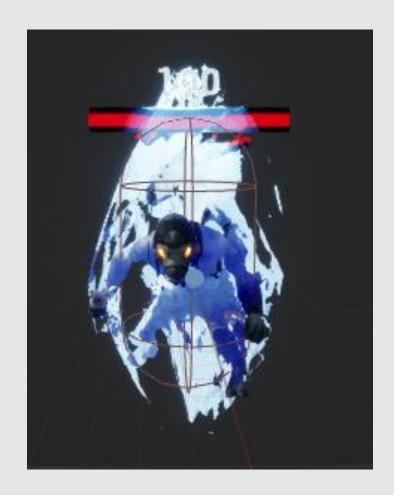

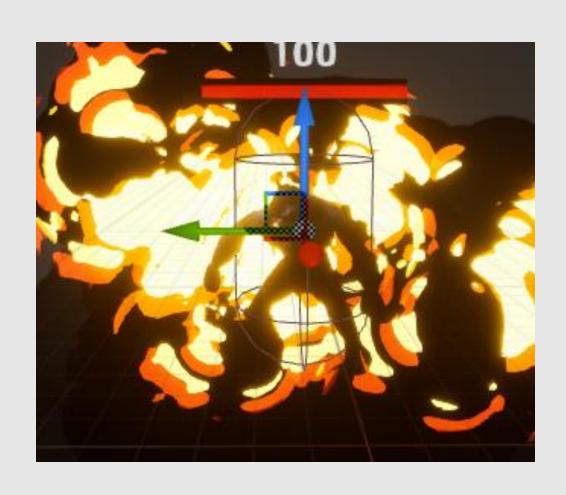

⑥冰+雷=超导:降低物理防御

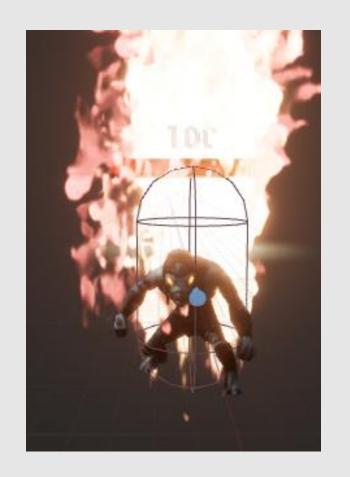

⑦水+冰=冻结

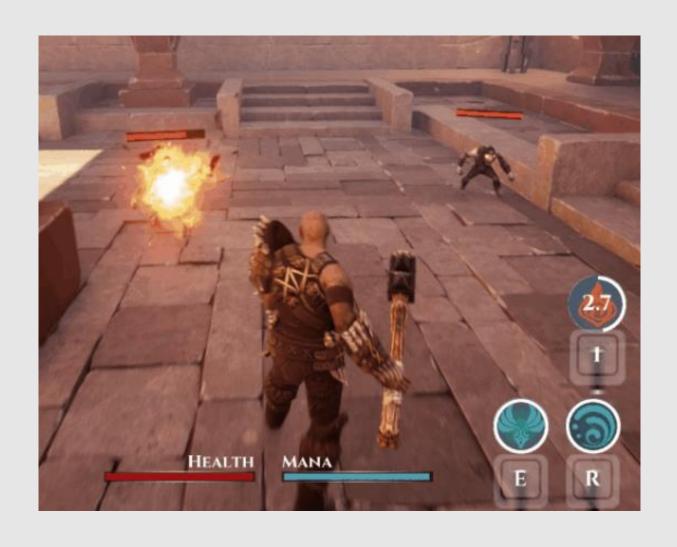

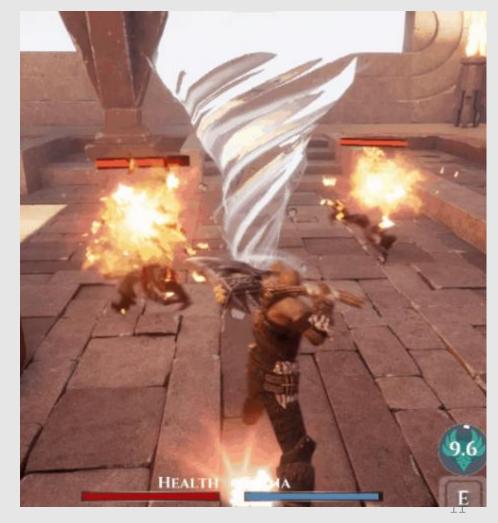

⑧火+雷=超载:造成范围爆炸伤害 ⑨水+冰=融化:生成火柱

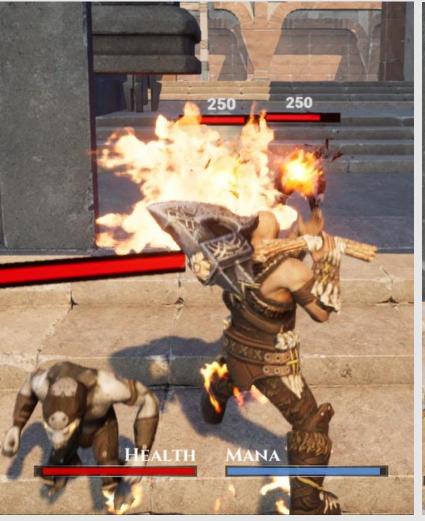

⑩风+其他=扩散:将该元素附着至其他怪物

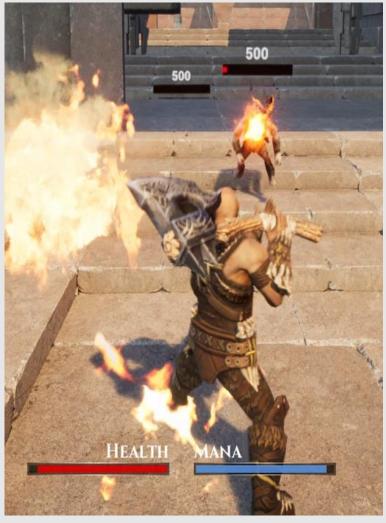

①1水+火=易伤: 短暂时间内提高一倍受到的元素伤害

# 四、完整项目演示

### 五、系统设计—模块设计

• 主要包括四个模块

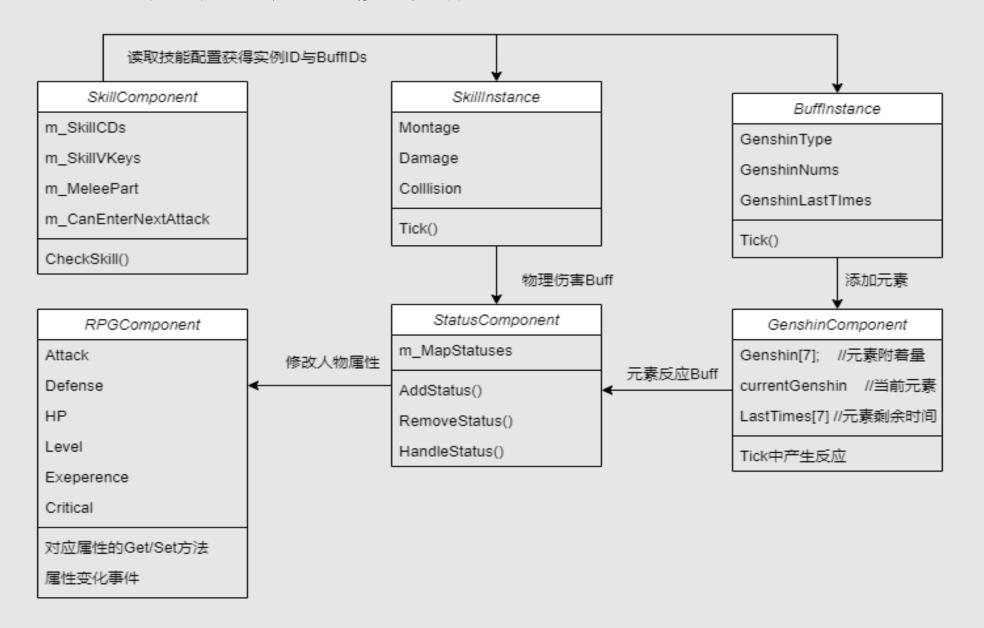

• Skill Module: 技能释放检测、CD等

• GenshinModule: 元素附着、反应等

• BuffModule: 更新人物当前所拥有的Status

• RPGModule: Buff最终会影响到人物状态

# 五、系统设计—模块交互

#### ✓数据驱动

- 简易的技能配置表、Buff配置表
- 一定的拓展性、维护性

- UE5 MassAI
- ActorComponent/WorldSubsystem→ Fragment/Processor
- Cache高命中率

#### ✓数据驱动

```
USTRUCT(BlueprintType)

Istruct FMJStatusData : public FTableRowBase

GENERATED_BODY()

public:
    FMJStatusData() {}
    UPROPERTY(EditAnywhere, BlueprintReadWrite, Category = "DataTable Status")
    int32 m_StatusID;

UPROPERTY(EditAnywhere, BlueprintReadWrite, Category = "DataTable Status")
    FString m_Name;
```

#### ✓数据驱动
